MODULE 01 | VERSION 3.0

Site Visit & Design Data

Governance-aligned controlled consolidation | 25 October 2026

DOCUMENT CONTROL	APPLICATION
Status	Harmonized business specification; approved prior module workflow retained with controlling Module 7 alignment.
Composition	This V3 addendum and the full previously revised module source are combined in a single PDF.
Priority	This V3 alignment governs in case of conflict. The original module source remains operative where not contradicted.
Central governance	Module 7 is a continuous operational backbone; it is not a gate to be completed after Module 6.
Authority	Documented GM-led delegation and owner-reserved matters replace generic or inconsistent old “Management alone” labels.
Scope of this module	From an agreed site visit date through verified site survey and Lead Architect release of site/design brief to Module 2.

1. Implementation interpretation and source preservation

This document intentionally retains the complete existing revised module specification after this amendment. Do not erase earlier workflow, screenshots, forms, stages or user-approved protections. Configure the shared functions from the V3 Master Architecture and Module 7 specification. The addendum is not permission to skip work or approvals.

2. Shared mandatory company controls

- GOV-01 Governance: The owner retains reserved strategic powers and protected oversight, while the employed General Manager (GM) holds company-wide operational accountability. Owner access to reporting does not authorize routine operational interference.
- GOV-02 Delegation: Department heads, Project Managers and designated officers may authorize decisions only within documented project, function, category, value and risk limits; above-limit or exceptional decisions go to GM. No employee may approve their own originating action.
- GOV-03 Technical independence: Valid safety and professional certifications are performed by competent authorized persons; neither a GM nor a financial waiver can substitute for a mandatory technical/statutory clearance.
- GOV-04 Evidence: Worker, junior designer, client, storekeeper, inspector, supplier and auditor original submissions are preserved with authorship, timestamp, linked versions and tamper-evident history. Review adds new records; it does not overwrite originals.
- GOV-05 Segregation: Requests, verification, approval, payment, receipt and audit must be appropriately independent. Where team size makes perfect separation impractical, a documented compensating review by an independent qualified officer is mandatory.
- GOV-06 Client access: Client portal content is limited to that client/project and expressly published revision; source design files, worker complaints, confidential pay, internal contracts and audit cases remain restricted.

- GOV-07 Controls: Accounts verifies funds/beneficiaries and books actual transactions; QS values cost and forecasts; Contracts verifies commercial entitlements; Compliance oversees obligations; QA checks systemic quality; independent audit observes, investigates and independently verifies closure.
- GOV-08 Exceptions and continuity: Documented financial/administrative exceptions may be decided by the authorized delegated manager or GM; there is no exception to mandatory law, safety, professional status or an already-required client acceptance. GM absence invokes only preapproved and HR-activated acting authority.

3. Updated operating workflow and stage gates

Intake

One combined new-client / confirmed site-visit booking; conversations before agreed date remain communication leads, not active projects.

Field survey

Assigned surveyor records original plot dimensions, GPS pin, sketches, terrain, sunlight and wind observations, notes, photographs and videos.

Technical review

Lead Architect validates the source survey, requests linked corrections and assigns a junior architect and deadline.

Client publication

Lead Architect authorizes exact report version to client portal, within defined technical publication delegation.

Handover

Approved, versioned design brief and files become Module 2 intake on unchanged project ID.

4. Module-specific accountability integration

CONTROL AREA	REQUIRED V3 BEHAVIOR
Booking fees / expense	Desk creates; Accounts confirms receipt or payment; Site Lead approves site costs within delegated limit; GM only escalations.
Field personnel credentials	HR registers staff; relevant technical lead validates competence; PM/management view compliance; no expired restricted-worker assignment.
Site report quality	Lead Architect owns technical quality. Central QA monitors recurring errors, but does not replace Lead Architect review.
Project record privacy	Client ID and parcel details access restricted by role, project assignment and published versions.
Desk AI intake	Any future multi-channel bot/agent drafts replies and triages; authority, explicit site date and human escalation remain controlled.

5. Conflict resolution register

OLDER / AMBIGUOUS WORDING	V3 INTERPRETATION
“Management” visibility to all surveys	GM has operating oversight; assigned technical heads and authorized delegated staff have working access; owner sees strategic and protected risk reporting.
Earlier description of “six modules”	Treat Module 7 as concurrent company-wide administration rather than a serial stage.

6. Developer data extensions / shared links

Maintain one stable ProjectId across all modules; preserve exact FileVersionId and client publication authorization, verify role scope server-side and append actor/timestamp/decision history for every state transition.

- Client/Enquiry/Channel
- SiteVisitBooking/AgreementEvidence
- SiteSurvey/Media/GeospatialObservation
- StaffAssignment/ProfessionalCredential
- SiteReportVersion/TechnicalReview
- PublicationGrant
- CostTransaction/ApprovalEvent
- AuditEvent

7. Mandatory integration acceptance tests

AT-01-01: Unagreed enquiry does not create active project or trigger Module 2.

AT-01-02: A changed client date creates a traceable booking revision.

AT-01-03: Junior or surveyor original upload remains immutable after Lead Architect comments.

AT-01-04: Lead Architect cannot publish unreviewed draft to a client.

AT-01-05: System prevents contractor/site-survey spending beyond approved delegation.

AT-01-06: Restricted site photos cannot be accessed by unrelated clients.

8. Required developer references

Read this PDF with 00 Master Architecture, Module 07 Central Administration and 08 Integration & Testing. Additional authoritative user decisions for Modules 1-6 prevail over older illustrative implementation examples where the later decision is more specific. Regulatory obligations must be validated with qualified advisors and current official sources before implementation.

MATHMAG BUILDERS LIMITED

MANAGEMENT SYSTEM

MODULE 01

SITE VISIT & DESIGN DATA COLLECTION

Unified enquiry and confirmed booking • Mobile survey • Lead Architect approval • Selective client publication

Plan better, build better.

Organization	Mathmag Builders Limited
Purpose	Revised developer-ready functional specification
Revision	2.0 | 24 October 2026
Approval basis	Confirmed business choices + clearly identified technical implementation recommendations
System scope	Module 01 of 06, on one persistent client/project platform

IMPLEMENTATION RULE

This revision replaces inconsistent stage assumptions in earlier drafts. A confirmed business decision is binding; illustrative fields, example APIs and implementation details must be validated in design review.

01 Purpose, boundaries and decisions

Single-entry client booking and design-data collection, leading to an architect-approved site brief.

Enquiry versus project	An enquiry is kept in the communications inbox and is not an active project. Create the project only after client and Mathmag agree a site-visit date and time.
Unified booking	Capture new/existing client details and appointment data in a single booking process.
Communication desk	Client Relations / desk personnel manage WhatsApp, Facebook, TikTok, YouTube and additional supported channel enquiries; integration depth is phased.
Mobile field visit	Record physical site observations, location, dimensions, orientation, wind, terrain, photos/videos, sketches and client requirements.
Architect quality gate	Lead Architect reviews site report, may return corrections, assigns junior architect and independently authorizes portal publication.
Handoff	Only an approved, assigned site/design brief can progress into Module 2 architectural tasks.

MANDATORY CONTROL

Publishing is not the same action as approving. A project must not be created from an enquiry without an agreed site visit appointment.

02 End-to-end site visit workflow

01	Communications Desk	Capture inquiry conversation and identify potential client; inbox lead only.
02	Booking Officer	Agree site visit date/time; register or link client, allocate visit and create persistent project ID.
03	Visiting Officer	Receive job in mobile dashboard, attend site, capture evidence and requirements.
04	Report Engine	Assemble structured branded site visit/design brief report with previews and referenced media.
05	Lead Architect	Return for corrections or technically approve the report; assign junior architect.
06	Lead Architect	Explicitly authorize which site report version/media the client may view.
07	Architectural Team	Receive the approved project brief and linked evidence to begin the 2D process.

03 Responsibility and approval matrix

Client Relations / Desk Officer	Manage conversation, contact identity and confirmed site visit booking; coordinate schedules and client questions; no authority to approve technical brief.
Visiting Officer	Capture field notes, sketches, media and design-data observations; submit report and respond to correction comments.
Lead Architect	Own report technical review, correction requests, junior assignment, approved version, and explicit client publication.
Junior Architect	Read approved brief and internal attachments for assigned project and receive Module 2 tasks.
Client	Review only own published site summary/report; submit feedback if enabled.
Management	See all project reports, assignments, processing delays, publication history and audit trails; manage roles and exceptions.

04 Enquiry and booking capture

Channel-aware client relations

• Unify message reference, source channel, date/time, client contacts, client interests and follow-up notes; avoid copying conversations without appropriate integration access.

• Do not mark every inquiry as a pipeline project. Maintain separate Inbox Lead and Confirmed Visit / Project statuses.

• AI-supported enquiry triage and handoff to humans is an optional phased feature, not a prerequisite for Module 1 completion.

Site visit booking form

• Capture client / legal owner, telephone, email, property location, county, approximate plot size, requested development, agreed appointment date/time and visiting officer.

• System assigns one immutable project reference only when appointment has been jointly agreed. Rebooking changes the appointment and retains its history.

• Invite client to portal when appropriate; absence of a portal account must not block field visit.

05 Mobile site-data collection and survey integrity

A. Visit identity	Project ID; client; visit date; visiting officer; location/address; geographic map pin; GPS accuracy if present.
B. Site geometry	Measured plot dimensions, approximate boundaries, access widths, existing structures, property features, plot sketch and measurement confidence.
C. Physical conditions	Terrain, slope, drainage/flood cues, soil observations stated as preliminary, vegetation, adjacent plots, utilities and access.
D. Environment	Observed wind direction, sunlight/sunrise/sunset orientation, likely shading and source/assumptions of observations.
E. Client requirements	Bedrooms/use cases, storeys, aesthetic preferences, budget aspirations, development phasing, accessibility needs and key constraints.
F. Media	Field photos/videos with captions, category, capture time, upload attribution, file hash, project and access classification.
G. Follow-up	Unknown measurements, missing title/survey data, required investigations and questions for client/architect.

MANDATORY CONTROL

Recorded soil observations or field measurements are preliminary and must not be presented as a certified geotechnical, boundary or structural survey unless separately commissioned and verified.

06 Site report generation and review

• Generate a versioned Site Visit & Design Brief Report incorporating selected client info, location, dimensions, terrain, orientation, client needs, limitations, site sketches and photo captions.

• Produce a staff-review PDF and editable document if supported; final client publication uses a locked PDF/image version. Source and editable files remain internal.

• Reports have Draft, Submitted, Returned, Approved, Superseded and Published flags as distinct concepts.

• Lead Architect comments must link to specific report version, required correction, owner and review timestamp.

• Publication control selects exact report version and individual media assets; client visibility may be revoked with a logged reason without destroying the internal original.

• Management can independently inspect original field uploads and the lead review trail, reflecting the evidence-transparency principle introduced later in Module 6.

07 Module 2 integration and project service pathways

• Handoff artifact contains the approved site report, design brief, photo/sketch set, location and a designated junior architect.

• Lead Architect and assigned junior can access internal working resources; client portal receives only approved PDFs/images.

• Design-only, approval-inclusive, full build, labour-only and supervision clients share the initial ID, but their later module activation depends on contracted service scope.

• Follow-up site visits become additional visit records linked to the same project; never create a new project for the same engagement by default.

• If new site findings materially change the design brief after 2D approval, open a controlled cross-module revision and revalidate dependent outputs.

08 Shared rules carried across all six modules

One lifecycle record	Maintain one project ID from confirmed site-visit booking through design, approvals, contracts, construction and post-handover. Never create a disconnected project just to open a new module.
Role separation	User role, project assignment and explicit approval authority determine every permitted action. Technical sign-off, financial validation, management approval and client acceptance are distinct records.
Evidence integrity	Preserve original submissions, attachments, timestamps, authors and immutable decision histories. Corrections create new records or versions; no silent overwriting.
Selective client access	Client accounts can access only their own projects and explicitly authorized files or updates. Internal working/source files, staff performance data and financial notes are never published by default.
Conditional service scope	Clients may purchase design only, printing only, approvals, technical supervision, labour-only building or full construction. Modules not contracted are not mandatory project steps.
Management-controlled exceptions	Any permitted exception requires identified management authorization, reason, date and retained evidence. Mandatory legal/technical clearances cannot be overridden.
Security and audit	Require authenticated accounts, least privilege, encrypted transport/storage, file scanning, access logs, project-scoped permissions, backups and recoverability.

09 Screens and user journeys

Communications Inbox	Lead pipeline, human handoff, channel links, conversations and booking action.
Unified Booking	Client lookup/new registration, appointment, assigned visiting officer, booking audit.
Mobile Site Survey	Offline-capable grouped fields, photo/video capture, sketches, coordinates and save/submit.
Site Report Review	Lead Architect annotation, correction cycle, version comparison and junior allocation.
Client Publication	Select authorized report/media; preview exactly what client can see.
Client Portal	Own confirmed project, appointment and authorized visit deliverables.
Management Queue	Overdue bookings, reports awaiting review, assigned workload, publication and audit.

10 Core data objects and key relationships

Logical entities for developer schema design. Names below are examples rather than prescribed database table names.

Client / Contact	Client ID, contact details, representative and consent/communication preferences.
Lead / Conversation	Source channel, external thread reference, history, status; not automatically Project.
VisitBooking / Project	Agreed date/time, project ID, location, client ID, officer, status, changes and booking evidence.
SiteSurvey / FieldObservation	Survey version, GPS, dimensions, orientation, terrain, design brief, assumptions, uploaded by.
SurveyMedia / Sketch	File pointer, hash, author, site/category, creation date, version, permissions.
ReportVersion / TechnicalReview	Report files, version, Lead Architect review, comments, decision and approved snapshot.
Assignment / PublicationGrant	Junior assignee/target; published file list, published by, date, revoked state.

AuditEvent	Actor, role, project, object, before/after IDs, event, immutable timestamp, reason.

11 Illustrative service and event contracts

Suggested API/service boundaries for planning. Authentication, validation, permission checks, idempotency and audit metadata apply to all write operations.

Confirm booking	POST /visits/confirm -> creates or links the persistent project ID on agreed booking.
Save site survey	POST /projects/{id}/surveys; PATCH /surveys/{id}/draft; submit separate action.
Review site report	POST /reports/{version}/lead-review with decision and annotations.
Create assignment	POST /projects/{id}/architectural-assignments referencing approved brief.
Publish report	POST /publications with exact media/document versions and Lead Architect authority.
Events	VisitConfirmed, SurveySubmitted, SiteReportApproved, SiteReportPublished, Module2Ready.

12 User acceptance tests and release criteria

• TEST 01 - Unconfirmed enquiries remain inbox leads without project IDs; agreed visit immediately creates one linked project.

• TEST 02 - Rebooking preserves original date/time and reason without duplicating a project.

• TEST 03 - Offline draft captures media and synchronizes without duplicated attachments or wrong project access.

• TEST 04 - Lead Architect can return report and receive new version; previous submitted evidence remains accessible.

• TEST 05 - A report approved internally but not explicitly published is unavailable in the client portal.

• TEST 06 - Other clients cannot enumerate, open or download site photos or reports.

• TEST 07 - Module 2 assignment consumes exactly the lead-approved site brief and assigned junior record.
