MODULE 05 | VERSION 3.0

Contracts & Service Activation

Governance-aligned controlled consolidation | 25 October 2026

DOCUMENT CONTROL	APPLICATION
Status	Harmonized business specification; approved prior module workflow retained with controlling Module 7 alignment.
Composition	This V3 addendum and the full previously revised module source are combined in a single PDF.
Priority	This V3 alignment governs in case of conflict. The original module source remains operative where not contradicted.
Central governance	Module 7 is a continuous operational backbone; it is not a gate to be completed after Module 6.
Authority	Documented GM-led delegation and owner-reserved matters replace generic or inconsistent old “Management alone” labels.
Scope of this module	Progressive service selection; versioned negotiation and legally controlled signatures; scope and payment readiness; conditional Module 6 activation.

1. Implementation interpretation and source preservation

This document intentionally retains the complete existing revised module specification after this amendment. Do not erase earlier workflow, screenshots, forms, stages or user-approved protections. Configure the shared functions from the V3 Master Architecture and Module 7 specification. The addendum is not permission to skip work or approvals.

2. Shared mandatory company controls

- GOV-01 Governance: The owner retains reserved strategic powers and protected oversight, while the employed General Manager (GM) holds company-wide operational accountability. Owner access to reporting does not authorize routine operational interference.
- GOV-02 Delegation: Department heads, Project Managers and designated officers may authorize decisions only within documented project, function, category, value and risk limits; above-limit or exceptional decisions go to GM. No employee may approve their own originating action.
- GOV-03 Technical independence: Valid safety and professional certifications are performed by competent authorized persons; neither a GM nor a financial waiver can substitute for a mandatory technical/statutory clearance.
- GOV-04 Evidence: Worker, junior designer, client, storekeeper, inspector, supplier and auditor original submissions are preserved with authorship, timestamp, linked versions and tamper-evident history. Review adds new records; it does not overwrite originals.
- GOV-05 Segregation: Requests, verification, approval, payment, receipt and audit must be appropriately independent. Where team size makes perfect separation impractical, a documented compensating review by an independent qualified officer is mandatory.
- GOV-06 Client access: Client portal content is limited to that client/project and expressly published revision; source design files, worker complaints, confidential pay, internal contracts and audit cases remain restricted.

- GOV-07 Controls: Accounts verifies funds/beneficiaries and books actual transactions; QS values cost and forecasts; Contracts verifies commercial entitlements; Compliance oversees obligations; QA checks systemic quality; independent audit observes, investigates and independently verifies closure.
- GOV-08 Exceptions and continuity: Documented financial/administrative exceptions may be decided by the authorized delegated manager or GM; there is no exception to mandatory law, safety, professional status or an already-required client acceptance. GM absence invokes only preapproved and HR-activated acting authority.

3. Updated operating workflow and stage gates

Selection

Client selection via portal/meeting of full construction, labour-only, technical supervision, or eligible follow-on services is preference, not legally binding acceptance.

Draft

Contracts Officer prepares template or custom contract; QS evaluates financial/scope terms; technical professionals review appropriate responsibility.

Negotiation

Client and company log comments and formal revisions; management approves exact final terms before parties sign.

Sign

Authorized corporate signatory binds Mathmag only within corporate delegated signature mandate; verify identity and physically/e-sign evidence.

Construction gate

Accounts verifies initial milestone, Compliance checks permits/NCA, PM documents readiness; planning-only Module 6 access may open while physical works locked.

Mobilization

GM or specifically authorized manager acts within valid delegation to authorize physical start after all nonwaivable gates; GM handles exceptions under matrix.

4. Module-specific accountability integration

CONTROL AREA	REQUIRED V3 BEHAVIOR
Company signature authority	Registered legal authority and formal GM delegation determine signatory. Contract Officer drafts/co-ordinates but does not self-sign beyond mandate.
New added services	Contracts coordinates client request and prices; delegated management activates only after acceptance and applicable payment check.
Financial terms	QS reviews value; Accounts verifies client collections; distinct financial exception required if initial milestone unpaid.
PM appointment	Delegated GM/management formally appoints PM within personnel/authority matrix; owner not automatically project PM appointing officer.
Statutory requirements	Compliance clearance independent of contract signature. No GM exception can waive NCA or mandated county approvals.

5. Conflict resolution register

OLDER / AMBIGUOUS WORDING	V3 INTERPRETATION
“Management alone authorizes signing/mobilization”	Implement eligible assigned delegated manager or GM within approved matrix; owner only reserved strategic agreements.
“Service selected” state	Require selection, offer, final approved version, signed, financially verified and work-authorized as distinct records.

6. Developer data extensions / shared links

Maintain one stable ProjectId across all modules; preserve exact FileVersionId and client publication authorization, verify role scope server-side and append actor/timestamp/decision history for every state transition.

- ServiceRequest/Selection
- ContractTemplate/ContractVersion
- NegotiationComment/ChangeLog
- AuthorityMandate
- ExecutionSignature
- ProjectManagerAppointment
- FinanceMilestone
- MobilizationReadiness
- ReleaseDecision
- AuditEvent

7. Mandatory integration acceptance tests

AT-05-01: Client selecting full contract without signing cannot unlock work.

AT-05-02: Unsigned or unapproved draft does not become binding version.

AT-05-03: Contract Officer cannot sign for company without recorded mandate.

AT-05-04: Construction financial exception cannot bypass missing NCA/permits.

AT-05-05: Planning-only work can be opened when physical construction remains blocked.

AT-05-06: Contract signature evidence and client accepted version match byte-for-byte/version ID.

8. Required developer references

Read this PDF with 00 Master Architecture, Module 07 Central Administration and 08 Integration & Testing. Additional authoritative user decisions for Modules 1-6 prevail over older illustrative implementation examples where the later decision is more specific. Regulatory obligations must be validated with qualified advisors and current official sources before implementation.

MATHMAG BUILDERS LIMITED

MANAGEMENT SYSTEM

MODULE 05

CONTRACTS & SERVICE ACTIVATION

Service selection • Negotiations • Signed agreements • Conditional construction activation

Plan better, build better.

Organization	Mathmag Builders Limited
Purpose	Revised developer-ready functional specification
Revision	2.0 | 24 October 2026
Approval basis	Confirmed business choices + clearly identified technical implementation recommendations
System scope	Module 05 of 06, on one persistent client/project platform

IMPLEMENTATION RULE

This revision replaces inconsistent stage assumptions in earlier drafts. A confirmed business decision is binding; illustrative fields, example APIs and implementation details must be validated in design review.

01 Purpose and stage position

Manage client service choices, construction and non-construction agreements, negotiation, signature, payments and controlled construction activation.

Owner	Dedicated Contracts Officer prepares and coordinates client contracts and amendments.
Management control	Management approves final proposal/agreement and authorizes company signing and activation.
Hybrid service selection	Client can choose through portal or physical/virtual meeting, with formal record of selected scope.
Contract generation	Support system templates and manual upload of Word/PDF agreement drafts and signed copies.
Negotiation	Portal comments and physical/virtual meetings; version every amendment and review decision.
Hybrid execution	Secure e-signature where legally appropriate or uploaded physically executed signed agreement.
Progressive services	Later services require a new controlled quote/contract/addendum, client acceptance and management activation.
Module 6 preplanning	After executed construction contract, Module 6 preconstruction planning may open conditionally; actual work remains blocked.

02 Service selection and alternative engagement routes

Design / planning only	Planning deliverables handed over at contracted stage; no automatic approvals or building obligations.
Printing / drawing delivery only	Contracted drawing print/delivery closes with a recorded authorized package; approvals not forced.
Design and authority approvals	Modules 1-4 as applicable, then service close-out or further contracted work.
Client appoints other builder	Mathmag completes its selected planning/approval tasks and records clear construction responsibility handoff.
Technical inspection / supervision	Module 6 enables only contracted inspection/supervision features, reports and agreed visits; do not imply responsibility for all construction works.
Labour-only construction	Module 6 includes workforce, tasks, quality, safety, client payment and labour responsibilities within contract; material ownership/procurement obligations may be client-side.
Full materials-and-labour construction	Module 6 full procurement, workforce, contracts, progress, safety, approvals, payments and handover as contracted.

MANDATORY CONTROL

No client is forced through construction or authority-application modules they have not purchased. Service obligations are determined by each executed agreement, not by a default system-wide workflow.

03 Contract selection, negotiation and signing

01	Client Indicates Service	Selects route in portal or recorded meeting, linked to existing project and accepted deliverables.
02	Contracts Officer Drafts Terms	Uses approved template or uploaded contract document with scope, fee, deadlines and responsibilities.
03	Technical and Commercial Review	Project Manager/QS/professionals provide inputs where construction, design or approvals obligations require.
04	Management Reviews Proposal	Approves offered terms, payment structure, exceptions and authorization for client presentation.
05	Client Negotiates	Comments in portal or recorded meeting; Contracts Officer creates revised version and returns for management approval.
06	Client and Mathmag Execute	Physically signed form uploaded or valid supported e-signature recorded; signing authority evidenced.
07	Accounts Checks Milestone	Verifies initial agreed payment and receipts; management documents eligible financial exception.
08	Management Activates Service	Records executed contract and opens only appropriate next-stage scope, with statutory gates intact.

04 Contract contents and version controls

Parties and property	Legal client/owner, Mathmag details, project location, property/parcel references and signatories.
Service scope	Deliverables and exclusions for design, approvals, labour, materials, supervision, variations and handover.
Technical responsibility	Relevant professionals, professional approval boundaries, standards and applicable statutory duties.
Price and payment	Contract value, deposits/milestones, valuation methods, payment channels, due dates, taxes as applicable.
Programme	Commencement requirements, completion targets, excusable delays and extension procedure.
Change management	Quotation, QS review, amended documents, management approval and client consent.
Risk and completion	Defects liability, warranties, retention where agreed, insurance, safety, handover and termination/dispute clauses.
Attachments	Approved scope, drawings/specifications, payment schedule and negotiated annexures attached by exact version.
Versioning	Draft, under negotiation, management approved, issued, executed, superseded, terminated and archived states.

05 Management approvals and signature controls

• Contracts Officer may prepare documents but cannot independently bind Mathmag or activate scope without management approval.

• An approval to share a draft with client does not count as acceptance of that draft by the client or completed execution.

• Record signatory identity, capacity, exact document version, type of evidence, time and any witness requirements where applicable.

• Execute through physical or supported electronic signatures suitable to the agreement and applicable law, without inventing professional/statutory signatures.

• Retain all negotiated/redlined versions, messages, meeting minutes and the signed final snapshot.

• Financial exceptions cannot waive NCA registration, mandatory approvals, professional certification or safe-work requirements.

06 Financial controls before construction

• Accounts maintains contract deposits, mobilization payment milestones, verified receipts, outstanding balances and scheduled contractual payment obligations.

• The agreed initial construction payment is a gate for actual mobilization; management may authorize an eligible documented exception only as permitted by contract and law.

• Contracted services are separated into service orders so payments for planning/printing/approvals and construction can be reconciled correctly.

• QS supports construction price/valuation data where the contract uses measured work; the Contracts Officer owns formal commercial terms.

• Management must confirm contractual acceptance and financial readiness before actual work starts, separately from Module 4 conditional completion.

07 Conditional Module 6 handover and physical mobilization gate

01	Executed Contract Filed	Store signed agreement, scope, payment schedule, drawings and authorizations.
02	Preconstruction Planning Opened	Allow Project Manager to prepare site readiness plan, requisitions and worker/subcontractor setup under restricted permission.
03	Early Procurement Exception	Project Manager may request specific early purchases; management explicitly approves each financial commitment.
04	Approvals and Registration Checked	Verify applicable authority approvals, contractor details and legally required project registrations.
05	Project Manager Readiness Report	Confirm access, temporary works/site controls, technical documents, programme, labour, safety, funds and other prerequisites.
06	Management Mobilization Decision	Management alone authorizes actual physical mobilization when all mandatory conditions are satisfied.
07	Module 6 Execution Activated	Record start date and release only work packages whose inspection/safety/finance gates are clear.

MANDATORY CONTROL

Signing the contract opens planning capability; it does not automatically authorize site works, procurement expenditure or NCA/statutory bypass.

08 Progressive service additions and change of engagement

01	Client Requests Additional Service	Capture request from portal, meeting or authorized desk channel.
02	Contracts Officer Screens Scope	Identify price, labour/material responsibility, approvals/compliance and requested deliverables.
03	QS / Technical Review	Obtain cost/time/technical input where required.
04	Management Authorizes Offer	Approve proposed separate agreement or addendum and applicable payment terms.
05	Client Formally Accepts	Accept the exact supplemental scope and price, then execute as required.
06	Accounts / Management Gate	Verify agreed milestone and activate new service via management decision.
07	Existing Project Retained	Update scope permissions on the same project with a versioned service-engagement history.

09 Subcontract and construction integration

• When a construction agreement is executed, management appoints the Project Manager directly; project manager assignment is not delegated by Contracts Officer.

• Module 6 subcontract appointments use Procurement quotation comparison, Contracts Officer subcontract drafting and management authorization.

• Client construction variations and additional works must return to Contracts Officer for documented terms, QS costing, management approval and client acceptance before execution.

• Construction reports, worker/client portal media, employee performance, payroll and warranty records activate only for contracted scope and appropriate roles.

• Service termination and exit must preserve already delivered files, statutory obligations and continuing warranties where applicable.

10 Shared rules carried across all six modules

One lifecycle record	Maintain one project ID from confirmed site-visit booking through design, approvals, contracts, construction and post-handover. Never create a disconnected project just to open a new module.
Role separation	User role, project assignment and explicit approval authority determine every permitted action. Technical sign-off, financial validation, management approval and client acceptance are distinct records.
Evidence integrity	Preserve original submissions, attachments, timestamps, authors and immutable decision histories. Corrections create new records or versions; no silent overwriting.
Selective client access	Client accounts can access only their own projects and explicitly authorized files or updates. Internal working/source files, staff performance data and financial notes are never published by default.
Conditional service scope	Clients may purchase design only, printing only, approvals, technical supervision, labour-only building or full construction. Modules not contracted are not mandatory project steps.
Management-controlled exceptions	Any permitted exception requires identified management authorization, reason, date and retained evidence. Mandatory legal/technical clearances cannot be overridden.
Security and audit	Require authenticated accounts, least privilege, encrypted transport/storage, file scanning, access logs, project-scoped permissions, backups and recoverability.

11 Screens and user journeys

Service Selection	Scope/type choice, package inclusions, excluded modules, client confirmation.
Contract Drafting	Approved templates and uploaded Word/PDF documents, attachment manifest and contract-specific clauses.
Negotiation Workspace	Version comparisons, redline/comments, meeting history and approval loop.
Management Contract Queue	Financial/technical risk summary, exact revision approval and signing authorization.
Signature Capture	Portal e-sign or physical signed upload with signer evidence.
Accounts Payment Gate	Contract deposits and mobilisation milestones, receipts and manager-approved exceptions.
Module 6 Readiness	Executed contract, planning-only status, compliance/finance readiness, mobilization recommendation and management activation.
Additional Service Requests	Change requests, independent quotes/addenda and management activation.

12 Core data objects and key relationships

Logical entities for developer schema design. Names below are examples rather than prescribed database table names.

ServiceEngagement / ScopeVersion	Project, service type, selected deliverables, exclusions, active status and change history.
ContractDraft / ContractVersion	Word/PDF pointer, attached approved plans/budgets, version, negotiated terms, status.
NegotiationNote / Meeting	Participant, date, topic, comments, requested change, source version.
ContractApproval / Execution	Management decision, signing authorization, parties, signature evidence, execution date.
ServicePaymentMilestone	Amount, due/paid, Accounts verification, permitted management exception.
ProjectManagerAppointment	Management appointer, designated PM, effective date, scope.

MobilizationReadiness / Release	Technical, financial, statutory, safety and management gate decisions.
ServiceChangeRequest / Addendum	Later client request, cost, approved offer, client acceptance and activation.

13 Illustrative service and event contracts

Suggested API/service boundaries for planning. Authentication, validation, permission checks, idempotency and audit metadata apply to all write operations.

Open selected service	POST /projects/{id}/engagements from client selection or meeting.
Prepare contract	POST /engagements/{id}/contract-drafts.
Management approve issue	POST /contracts/{ver}/management-approval.
Record signing	POST /contracts/{ver}/execute (signatures + evidence).
Appoint Project Manager	POST /projects/{id}/manager-appointment (management-only).
Preconstruction handoff	POST /projects/{id}/module6/preconstruction-open.
Mobilization authorization	POST /projects/{id}/module6/mobilization-release.
Events	ServiceSelected, ContractExecuted, AdditionalServiceActivated, Module6PreplanningOpened, MobilizationAuthorized.

14 User acceptance tests and release criteria

• TEST 01 - Design-only/printing-only and own-builder clients can complete service without forced construction activation.

• TEST 02 - Contract edits create a new version; executed version is immutable with full signatory proof.

• TEST 03 - Contracts Officer cannot bind Mathmag or publish final unapproved contract terms.

• TEST 04 - Client can later purchase an additional service on same project only after new management approval and formal acceptance.

• TEST 05 - Module 6 preconstruction tasks can open upon execution while physical tasks remain blocked.

• TEST 06 - NCA or other mandatory statutory obligations cannot be waived by a payment exception.

• TEST 07 - Management directly appoints Project Manager and alone issues mobilization release.

• TEST 08 - Early material purchase requires item-specific management expenditure approval.
